

# Science Experiment

**What:** Create a film of a science experiment that lasts less than 5 minutes.

**Your movie should include:**

- A title at the beginning
- Credits at the end
- List of materials
- A well-filmed and edited science experiment
- Steps as captions during the film (example: 1. Cut the watermelon)

**Your science experiment must be something safe! Be smart about what you choose and wear appropriate safety gear! It can be something quick or something you film over time, then speed up or use time lapse to show the change.**

**Need an idea for an experiment**
